🔴 Notified Stephane Ducasse.

Now that we use Manifest in the `ReleaseTest` when running the ` RBRepeteadMethodsInTheSuperclassRule` rule, it's up to you to create a Manifest to explicitly exclude those few methods that have to be duplicated.

💬 Assigned to Igor Stasenko by Camillo Bruni Wed Aug 28 2013

⚫ Notified Igor Stasenko, Stephane Ducasse.,Status changed from 'Work Needed' to 'Resolved (Fix Review Needed)'.

I tried to fix some stuff in Manifest in parallel, but this is hard since this code was never used in real-life!

- removed quite some duplicated methods all over the system
- fixed quite a few duplicated methods, there are currently only 2 methods that are duplicated `NBTextExternalValue` which I think are wrongly duplicated.
- except for the superclass test everything pass

What to do? Manifest does not properly solve this problem (at least I do not know how to solve it)
